Proposal 2: Grown

Organisation Overview

Organisation Name: Grown

Grown is a new hair and beauty business that specialises in natural hair products and hairstyling services for women. The business provides services for women who want their hair washed, blown and straightened using various products that promote natural hair growth and maintenance. They also sell natural hair products made with all natural ingredients.

As a new business, Grown needs to have a strong presence on the internet to introduce the brand to potential clients and to build trust for the brand. The proposed website is meant to be the business information platform and an online store for people to purchase products and to book hair their hair appointments. (Bit.ai Editorial Team, 2023).

The mission of Grown is to generate income for the business by providing luxury hair services and through selling natural hair care that promote growth and good quality maintenance. The vision for Grown is to become a trusted and recognisable luxury natural-hair brand that provides quality hair products and professional services for straight natural ladies.

The target audience for Grown are women and girls who specifically are straight naturals. These are ladies who want to grow and maintain their hair with natural remedies with little to know invasive chemicals that come from relaxers. They are also women and girls who love wearing their natural hair and to straighten the hair from time-to-time. The website will mainly target customers in the located in Johannesburg and the surrounding suburbs because this is where the business is located in. (Bit.ai Editorial Team, 2023).

Website Goals and Objectives

The main purpose of the website is to bring in new customers and bring more visibility and professional identity for this small business. This website will also help to bring a formal booking system and generate a way to make sales on an online platform for the customers convenience

The website will aim to:

- Increase visibility and awareness of the Grown brand.
- Allow customers to see the hair services and products that are a available.
- Allow customers to book appointments.
- Display prices and service information.
- Sell natural hair products online.
- Encourage customers to make repeat purchases.
- Provide Grown's contact and social-media links to customers.
- Build customer trust through professional images and reviews. (Bit.ai Editorial Team, 2023).
-

Key Performance Indicators (KPIs):

- The number of monthly visitors to the website.
- The number of appointment bookings.
- The number of online product orders.
- Online sales revenue that are generated.
- The conversion rate of the products.
- The number of enquiries made by customers.
- The number of visitors coming from social media platforms.
- The number repeat customer purchases. (Bit.ai Editorial Team, 2023).
-

Current Website Analysis

Because Grown is a new business it does not have a fully developed website. This provides an opportunity to build a strong brand online from the very start. Without a website, potential

customers will have difficult time finding the services and prices that the business offers. Social-media platforms can provide exposure but a business website will give Grown greater control over its brand, customer information and online sales process. (Bit.ai Editorial Team, 2023).

Website Features and Functionality

The website will include:

Home Page for this page will introduce Grown and display promotional content.

About Grown for this page will share the business story, mission, and values

Services Page for this page will provide information about hairstyling services such as washing, blow-drying, and straightening.

Gallery for this page will display photographs of completed hairstyles.

Online Store for customers or clients will be able to browse and purchase hair products.

Product Search and Categories for this feature will help customers find products more easily.

Shopping Cart and Checkout for customers or clients will be able to purchase products online.

Appointment Booking for customers or clients can select a service and choose a preferred booking date and time.

Contact Page for this page will provide phone numbers, email addresses, location details, and social media links.

Customer Reviews for testimonials and reviews will help build trust with potential customers.

FAQ Section for this section will answer common customer questions. (Bit.ai Editorial Team, 2023).

An e-commerce platform such as WooCommerce can be used because it supports product catalogues, shopping carts and online payments. South African e-commerce websites usually use platforms like WooCommerce and Shopify. WooCommerce offers flexibility but requires more of hosting and ongoing maintenance. (HostWP, 2026)

2.5 Design and User Experience

The Grown website should have a modern, feminine, natural and luxury aesthetic.

Proposed colour scheme:

- Vivid azure – #0BACBB
- Yellow – #FFEB3B
- White – #FFFFFF
- Dark grey - #303030

These colours communicate natural beauty, hair care and sophistication.

Typography:

- Headings: Binate
- Body: TT Chocolates
- Buttons: Binate

The homepage should immediately show attractive photos of natural hairstyles and products. The navigation should have the navigation menu and must have the following options:

- Home
- About
- Services
- Gallery
- Shop
- Book Now
- Contact

The most important buttons should be Book an Appointment and Shop Products. Those ones are very important

Technical Requirements

The website can be developed using HTML, CSS and JavaScript, with WordPress if needed, to be used for content management and WooCommerce for e-commerce functionality. A responsive design will make sure that customers will be able to browse and as well as buy the products using a smartphone. (Juicy Designs, 2026).

The website will require:

- A .co.za domain.
- Reliable web hosting.
- SSL or HTTPS security.
- Product database.
- Online payment gateway.
- Shopping cart and checkout.
- Appointment-booking functionality.
- Database backups.
- Mobile optimisation.
- Basic SEO.

Customer data protection.

The current South African estimates suggest that e-commerce websites can range from approximately R7500 to R200 000 depending on the complexity. Other ongoing e-commerce costs can include hosting, plugins, maintenance and payment transaction fees. (LaunchLlama, 2026). (Juicy Designs, 2026).

Timeline and Milestones

Days	**Activities**
